Final Insights & Recommendations

1. Profitability Improvement

Insight:

Total Sales: ₹63.37M

Total Profit: ₹12.12M

Overall Profit Margin: 19.1%

Monthly profit margins remained relatively stable, but Q2 and Q3 of each year showed **slightly lower margins**.

Recommendation:

Target profit margin improvement of 5% by focusing on high-margin products and optimizing discount strategies.

Reduce low-performing promotions, especially those offering >15% discounts which are negatively impacting profit.

2. Product Performance

Insight:

Top 3 Most Profitable Categories:

Books, Home Goods, Office Supplies (each with ~₹2.1M in profit)

Bottom 3 Categories (in terms of profit):

Apparel, Electronics, Food (lower profit ~₹1.9M each despite good sales)

Recommendation:

Prioritize inventory and marketing for **Books & Office Supplies**.

For **Electronics & Apparel**, analyze cost structures or reduce SKUs with low margins.

Consider **bundling low-performing products** with bestsellers to boost profitability.

Final Insights & Recommendations

3. Regional Optimization

Insight:

Sales are fairly consistent across all regions (₹12.3M–₹12.9M), but **Profit** is almost equal in all regions (₹2.4M–₹2.5M)
No region shows alarming underperformance, but **growth appears flat** across all.

Recommendation:

Investigate regional **marketing and customer engagement strategies** to unlock new growth opportunities.
Use high-performing region tactics (e.g., promotions, product mix) in slightly lower-margin regions.

4. Customer Segmentation

Insight:

Top Segments: Consumer (₹21.7M sales), followed by Home Office and Corporate.
Profit contribution is also led by the **Consumer segment**.
Top 10 customers generate ~**₹42K sales each**, bottom 10 generate <**₹20K**, with some at negative profit.

Recommendation:

Double down on Consumer segment with personalized campaigns.
Improve targeting for **Home Office** via loyalty programs.
Phase out or re-engage low-profit customers with tailored offers or service packages.

Final Insights & Recommendations

5. Discount Effectiveness

Insight:

- Most frequent discounts are 0–15%.
- Higher discounts (20–30%) correlate with **lower profits**.
- Discounts beyond 10% do not show proportional sales increase.

Recommendation:

- Limit discounting above 15%**, especially on low-margin items.
- Run **A/B testing** for different discount levels to find optimal ROI.
- Implement **targeted discounts** for loyal or high-potential customers only.

6. Payment Method Preferences

Insight:

- All four payment methods are nearly equal in usage (~25% each).
- Cash on Delivery** accounts for slightly more sales (₹16.1M).

Recommendation:

- Promote **digital payments (Credit Card, PayPal)** through cashback or faster delivery incentives to reduce COD-related overheads.
- payment method vs. return rates** for future optimization.

Final Insights & Recommendations

7. Shipping & Order Handling

Insight:

All **shipping modes** show similar average profit (~₹1K) and duration (~4 days).
Standard Class and Second Class are most used.

Recommendation:

Consider offering **express options** at a small premium to increase revenue per order.
Optimize warehouse-to-region routing to reduce **average delivery time**.

Overall Strategic Recommendation:

To enhance **profitability by 5% and market share**, GlobalMart should:

Optimize discounts to avoid margin erosion.
Focus on **profitable products and customer segments**.
Improve **digital payment adoption** and delivery efficiency.
Leverage insights from high-performing customers and regions to uplift weaker areas.
